

Dear Valued Customer,

At Dill Air Controls, we are always looking for ways to improve our operations while staying true to our core values of quality, reliability, and sustainability. Today, I am excited to share an important step we've taken toward a more energy-efficient future.

We recently installed solar panels on the roof of our Oxford, North Carolina facility. This investment underscores our commitment to sustainability, operational efficiency, and the strength of American manufacturing. In the coming years, we expect this initiative will supply the majority of our energy needs, allowing us to reduce our carbon footprint while maintaining the high standards you expect from us.

This was a logical decision for our company—not only does it help control long-term energy costs, but it also reinforces our dedication to producing high-quality products right here in the United States. We take pride in manufacturing solutions that support the automotive, industrial, aviation, and commercial markets, and this initiative aligns with our mission to operate responsibly while delivering the best to our customers.

We appreciate your continued trust in Dill Air Controls. Your support enables us to innovate, grow, and make investments that benefit both our industry and the environment. We look forward to serving you with the same level of excellence and commitment that defines our company.

Thank you for being a valued partner.

Sincerely,

President
Dill Air Controls
